

## **Brainstorming & Idea Prioritization**

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 28-09-2026 to 30-09-2026                       |
| <b>Team ID</b>       | SWTID-2026-9565                                |
| <b>Project Name</b>  | Implement Client Script & UI Policy (Incident) |
| <b>Maximum Marks</b> | 3 Marks                                        |

### **Step 1: Brainstorm and Idea Listing**

Each team member lists ideas related to improving data accuracy and user interaction in the ServiceNow Incident form.

| S.No | Team Member    | Idea / Suggestion                               | Category            | Group No. |
|------|----------------|-------------------------------------------------|---------------------|-----------|
| 1    | MUTHU SELVI P  | Identify incomplete Incident information        | Incident Data       | 1         |
| 2    | MAHESHWARI R   | Make Assignment Group mandatory for High Impact | Data Validation     | 1         |
| 3    | MADHU VARSHA S | Control Urgency field for High Impact           | Conditional Control | 1         |
| 4    | MUTHU LASHMI M | Automatically set Urgency when Impact is High   | Automation          | 1         |
| 5    | LAKSHMANAN     | Prevent unauthorized State list edits           | Access / Control    | 1         |

### **Step 2: Idea Prioritization**

Ideas are compared using feasibility and importance before the project solution is finalized.

| Group No. | Final Idea                         | Feasibility | Importance | Priority | Selected |
|-----------|------------------------------------|-------------|------------|----------|----------|
| 1         | High Impact UI Policy              | High        | High       | High     | Yes      |
| 2         | Assignment Group Mandatory Control | High        | High       | High     | Yes      |
| 3         | Automatic Urgency Update           | High        | High       | High     | Yes      |

### **Selected Project Direction**

Implement Client Script & UI Policy (Incident) — combine UI Policy controls with onChange, onSubmit and onCellEdit Client Scripts to enforce field behaviour, automate values, validate submission and control direct list editing.
