| <b>Project Name</b>  | Implement Client Script & UI Policy (Incident) |
| <b>Maximum Marks</b> |                                                |

### **Proposed Solution Overview**

The proposed solution is a lightweight ServiceNow Incident configuration combining one High Impact UI Policy, UI Policy Actions and three Client Scripts. The controls work together to improve data quality and user interaction.

| No. | Feature                           | Design                                             |
|-----|-----------------------------------|----------------------------------------------------|
| 1   | High Impact Control UI Policy     | Condition: Impact = High; Reverse if false = True. |
| 2   | Assignment Group UI Policy Action | Mandatory = True for High Impact.                  |
| 3   | Urgency UI Policy Action          | Read-only = True for High Impact.                  |
| 4   | onChange Client Script            | Set Urgency to High when Impact becomes High.      |
| 5   | onSubmit Client Script            | Block save when High Impact + Assigned To empty.   |
| 6   | onCellEdit Client Script          | Block direct State changes from list editing.      |
| 7   | Form-based State Update           | Allow State changes through the Incident form.     |

### **Design Flow**

Impact selected → UI Policy condition evaluated → field actions applied → Client Script responds to changes/submission → valid Incident data is saved or invalid action is blocked.
