

Code - Layout, Readability and Reusability

Date	28-09-2026 to 30-09-2026
Team ID	SWTID-2026-9565
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	

Coding Standards Applied

Practice	Implementation
Clear Naming	Names describe the purpose: High Impact Control, Auto set urgency for high impact, Prevent save if Assigned To missing, Prevent state change via list edit.
Single Responsibility	Each Client Script handles one responsibility.
Readable Logic	Conditions are simple and use standard g_form methods.
Reusable Configuration	UI Policy condition and field rules can be extended to other Incident scenarios.
Maintainability	Table, type, field and active settings are explicitly defined.

Code Layout Example

```
function onChange(control, oldValue, newValue, isLoading) {  
  if (isLoading || newValue == '') { return; }  
  
  if (newValue == '1') {  
    g_form.setValue('urgency', '1');  
    g_form.addInfoMessage( 'Urgency set to High for  
    High impact incident.'  
  );  
  }  
}
```

Reusability

The project separates conditional UI behaviour from validation and list-edit control. This makes each rule easier to test, update and reuse for additional Incident conditions.
